The Fire Marshals Association of Missouri in conjunction with Three Rivers Community College Presents

Building Construction: A Firefighters Perspective

Understanding the variation in how and why buildings are constructed can mean the difference between a safe, efficient fireground operation, inspection or investigation and instant tragedy. We’ll provide you with up to date information and tools to allow you to distinguish between the different construction types and how they are likely to react during a fire. Special attention is paid to the types of construction encountered in your community.

Earn MO Division of Fire Safety CEU’s (Inspector & Investigator) while participating in a unique, fast-paced, informational presentation on building construction presented by firefighters for firefighters.
